INTRODUCTION

BAB Coin is a crypto-currency token that is hosted on multiple Blockchain - BEP 20, Which is introduced by BAB Coin with a Max Supply of 99 Million, It allows cross- chain to the holders. Black Bull Coin provides high-end security on transactions while working on Binance smart chain-based Blockchain system.

It is open-source and decentralized, with consensus achieved using proof of stake. It has been launched with a strong focus on decentralization and scalability, and it enables complete privacy.

BAB Coin has a substantial Ecosystem around which includes Launchpad, Swap Exchange, NFT Marketplace, Gamefic, Exchange, and many other components to make the BAB Coin Network more efficient. So, BAB Coin is the most important part of the BAB Coin ecosystem.

www.bab99.org

ABOUT US

BAB coin initially run on the BSC Blockchain with BEP-20 standard. Binance Smart Chain is a recent development that benefits its users with a rich and growing digit asset ecosystem like never seen before in the decentralized Exchange spectrum.

BAB Coin is the cryptocurrency issued by Binance Smart Chain and trades with the USDT BEP20 coin.
Binance Smart Chain is an independent blockchain that runs in tandem with the Binance Chain.

It is open-source with consensus achieved using Defi. It has been launched with a strong focus on Exchangers and scalability, and it enables complete privacy.

BAB World has a Valued Ecosystem around which includes Launchpad, Swap Exchange, Defi Ecosystem, Gaming's , and many other components to make the GAI World Network more efficient.

HOW IT WORKS

We work tirelessly to ensure every excruciating detail is refined to perfection.
Our experienced graphic design team works day and night to bring all our ideas to life and to build one-of-a-kind gaming experience.

The number one priority of Project BAB Coin will always be to carefully listen to the wishes of our community and to deliver a product that will make every investor proud.
Everyone who loves profits, that's why BAB Coin token omics have been Specifically Engineered to bring profits to your Wallet in more than one way. The Reward feature automatically brings additional Tokens to your Wallet whilst you sit back and Relax. The Marketing Wallet ensures steady growth. And finally, the Auto Liquidity feature brings Stability to the Price Floor.
Don't just read here, click on the links below and join us!

MISSION

➢ To try on unlocking BAB Coin potential and making BAB Coin easy to use.

➢ To make BAB Coin market place with global reach.

➢ To provide attention to the financial profits and safety of every single stakeholder.

➢ To facilitate the ability of buyer-seller to transact a wallet in the most secure way.

VISION

➤ To create a global BAB Coin marketplace where buyers and sellers can buy, sell and trade BAB Coin in most secured and trusted manner.

➤ To solve current problems of customers in a manner that make their business easier.

Core Values

Be Magical. We are positive and kind above all else. Our main goal is to create happiness in other lives. Be Charitable We strive to be as giving as we can possibly be, helping out much as we can. Be Sustainable We make decisions that are based on our long-term health, not the short-term gain. Be Transparent We strive to be open and honest with our community at all times, for the benefit of all.

Ecosystem

BAB Coin is a company that aims to bring innovation and novelty to the gaminig, defi, utilities, nft, sports, forex and crypto trading sector through its Blockchain technology. The ecosystem of BAB Coin is very vast and broader as it is embedded with bsc that makes it more essential for the people associated with the agriculture and food sector.

Binance Blockchain Technology

A decentralized open-source Blockchain-based operating system with smart contract proof-of-stake capability, principles for its consensus cryptocurrency process, and a unique to the system, a known as Binance is decentralized, open-source Blockchain-based operating system (BSC).

PROOF OF STAKE

Seeing as cryptocurrencies are decentralized and not controlled by banks, they require a way to verify transactions. Proof of stake is a popular method (PoS). Proof of stake is a consensus mechanism for cryptocurrencies. By staking their coins, cryptocurrency owners can check new transactions and add them tooo Blockchain. This method replacestheproof of work, the first cryptocurrency consensus mechanism. Proof of stake has grown in popularity as concerns about the environmental impact of crypto mining have grown. Proof of stake is critical for cryptocurrency investors. These are some examples of cryptocurrencies that use it. Owners of a cryptocurrency can stake coins and create their own validator nodes using the proof-of- stake model. Staking is the act of pledging your coins to be used for transaction verification. They are locked while you stake your coins, but you can unstack them if you want to trade them. When a block of transactions is ready to be processed, the proof-ofstake protocol for the cryptocurrency selects a validator node to review the block. The validator verifies the accuracy of the block's transactions. If this is the case, they add the block to the Blockchain and receive cryptocurrency as a reward for their efforts. If a validator proposes adding a block with incorrect information, they will be penalized by losing some of their staked holdings.
WORKING WITH BINANCE SMART CHAIN

Binance is founded on a few essential concepts, the most important of which is decentralization. All data on the Blockchain is completely unfettered and is not under the jurisdiction of a central authority. Content creators can receive Binance in return for sharing their work. Additionally, developers can create their own coins on the Binance network. These tokens can then be used in the network's user-created decentralized apps (Dapps). Binance main token is used to back the newly issued tokens. The network's ultimate step of support Binance -based games. These games decentralized, with users rewarding authors directly if they enjoyed the game. Binance's consensus algorithm is referred to as delegated proof- of-stake. In this system, transactions are authenticated by 27 super representatives who are responsible for keeping the transaction history. Super representatives are picked every six hours and compensated with a Binance coin created by the system. Every three seconds, a new block is added to the Binance Blockchain.

BENEFITS OF BINANCE SMART CHAIN

Transactions on the Binance Blockchain technology at Very Less Cost. Binance does not impose a fee for asset transfers. It assists sellers and buyers through its free transactions, promotes, and provides the optimal business environment. Rapid transactions The network can handle up to 2000 transactions per second. Scalability and the potential to revolutionize online media are encouraged by such transactional capacity. This is a major accomplishment compared to Ethereum (25 transactions) or Bitcoin (3-6 transactions). Creates dApps On the network, you can create dApps. You can earn digital assets by creating a dApp on the network and offering content on it. These can be in regular Binance you created Binance backs that. As a result, you may be compensated for your efforts in your own dApps, you can still browse through the vast collection already created.

.

Supports Creators

Binance believes it is essential to support content owners more effectively, and a network is an amazing option. If you're a 2020 internet user, chances are you enjoy having to read digital content. Because content creators enable you to be happy while watching, it is only fair that they are compensated fairly for their efforts

Anonymous Transaction

Transactions on the Binance network are anonymous, but only on the network itself. The act of purchasing BNB and the requirement of using an exchange means that you will have to prove your identity to purchase Binance tokens in the first place. Transactions can, however, be carried out anonymously once on the network. On the other hand, it should be noted that all Blockchain keep a record of all transactions that take place on the chain. As a result, no transaction can ever be truly anonymous.

Safe

Black Bull Coin has a solid reputation in the cryptocurrency world. The amount of money spent by the company on security and the personnel it has hired demonstrates this. As with other cryptocurrencies, because it is a decentralized network, the individual bears a significant responsibility for safeguarding their tokens. In terms of the network as a whole, there has yet to be a security breach.

www.bab99.org

MAKING CRYPTOCURRENCY USEFULL

While more people are projected to continue moving toward online shopping at the expense of traditional brick-and-mortar retail stores, the modern-day digital payment instruments around the world consist of complicated financial settlement processes that cost merchants up to 4% in processing fees for purchases. They also involve a chain of intermediaries, all delaying transaction speed with discrete stages to process a single exchange or payment..

Reports have shown that retail fraud is persistently increasingly under the current financial settlement processes as businesses face multifaceted threats of all sizes. According to research published by Jupiter Research, ecommerce retailers are at risk of losing over $20 billion in 2021 to online fraudulent activities- an amount representing an 18% increase from the previous year's loss. The frauds come in the form of identity theft, chargeback fraud, 'silent' fraud, account takeovers, and 'pharming' among others.

DECENTRALIZED

DeFi is a collective term for financial products and services that are accessible to anyone who can use Ethereum – anyone with an internet connection. With DeFi, the markets are always open and there are no centralized authorities who can block payments or deny you access to anything. Services that were previously slow and at risk of human error are automatic and safer now that they're handled by code that anyone can inspect and scrutinize.

- A global, open alternative to the current financial system.
- Products that let you borrow, save, invest, trade, and more.
- Based on open-source technology that anyone can program with.

Charity

Digital fundraising may also benefit from Blockchain, as charities can receive contributions in a safe, transparent, and worldwide manner without having to pay currency exchange commissions. Donations to charitable organizations on Kissan will be accepted, and they will be handled securely and transparently for the benefit of those who make them.

Bonus

You can earn money in BAB Coin by opening new account with certain financial institutions and participating in the digital token-based economy supported by bonuses. These bonuses will not end here; instead, you will be able to earn from various other offers based on your investment and profit.

Why BAB Coin?

Zero Human Factor;-
The human factor is not taken into consideration. The smart contract is not dependent on anyone, and there is no way to prevent the platform from functioning.

Referral Provides
There are no hidden fees, and all funds are transferred between members without any intermediaries.   contract balance is always a negative number. The

Nobody has the authority to ban you from the platform because the contract does not   contain a provision for   such a restriction.
Immutability of Conditions

Decentralization ;-
Instead of having managers or administrators in charge, there are only creators
who are members of the community on the platform, just like everyone else.
Instant Transactions ;-
Profits earned by other members are transferred directly into your personal wallet. There is no hoarding in the system, and all of your earnings are yours to keep. Transparency and Anonymity ;-

Because the smart contract code is public, anyone can view the complete history of all transactions. This ensures that the conditions are pure and that the platform statistics are accurate.

www.bab99.org

SMART CONTRACT

Binance Blockchain was designed to streamline communications. It ensures easy integration with a wide range of highly sophisticated programming languages. Binance is designed as a three-layered system. It consists of a core layer, storage layer, and application layer. Interestingly, each layer is optimized to perform a certain set of functions for a specific set of functionalities. It is the core layer that oversees the management of Binance

emerged as the next-big-thing in the world. It has potential to deliver better results to every single if implemented correctly. In a very short duration, this technology has shown strong prospects and already delivered some very impressive results to different industries. The DeFi Binance token is a new concept that is gaining a lot of traction and giving companies a chance to be more efficient.
WHAT IS DEFI?

Decentralized finance (DeFi) is an emerging peer-to-peer financial system that uses blockchain and cryptocurrencies to allow people, businesses, or other entities to transact directly with each other. The key principle behind DeFi is to remove third parties like banks from the financial system, thereby reducing costs and transaction times.

In the U.S., the Federal Reserve and Securities and Exchange Commission (SEC) define the rules for centralized financial institutions like banks and brokerages, which consumers rely on to access capital and financial services directly. DeFi challenges this centralized financial system by empowering individuals with peer-to-peer transactions.

WHY IS DEFI IMPORTANT?

DeFi takes the basic premise of BAB Coin— digital money — and expands on it, creating an entire digital alternative to Wall Street, but without all the associated costs (think office towers, trading floors, banker salaries). This has the potential to create more open, free, and fair financial markets that are accessible to anyone with an internet connection.

WHAT IS METAVERSE?

The metaverse refers to the convergence of physical and virtual space accessed through computers and enabled by immersive technologies such as virtual reality, augmented reality and mixed reality. Described by proponents as the next iteration of the internet, this 3D virtual world is envisioned as a persistent, collective, shared space where digital facsimiles of ourselves, or avatars, move freely from one experience to another, taking our identities and monetary assets with us. Visions of a parallel digital universe where humans can experience life in ways both akin to and not possible in the real world aren't new -- they predate the internet. But the concept of a blended physical and digital reality became more tangible in recent decades as technological advances -- from the near-universal adoption of mobile phones and rollout of high-speed internet to popular games such as Pokémon Go -- made the metaverse seem less far-fetched.

www.bab99.org

CRYPTO GAMING

NFT games are Play-to-Earn (P2E) games that give users more control over in-game assets. They make it possible as the in-game items are NFTs that you can buy, sell and trade with other players on the platform as per your wish.

Experts have made this possible by developing games on the blockchain platform. These games' in-game assets are NFTs with unique values and traits. This gives the owners of these items a lot of benefits. They are:

Immutability
As each in-game item you own is an NFT, it exists independently on the blockchain even if the game shuts down. Thus, regardless of what happens to the game, you can buy or sell your NFTs on the marketplace.
Furthermore, new games can be made to utilise these NFTs. As NFTs are based on blockchain principles, the data inside them is unchangeable and tamper-proof.

Interoperability
In traditional games, you're in-game assets are only usable within that game. You cannot use those in other games. NFT games change this situation with the help of blockchain technology. The in-game items of NFT games are interoperable. That is, you can easily use the in-game items of one game in

another, provided they are built on the same blockchain.

BAB Coin Network

Black Bull Coin Global Network – Black Bull Coin an experienced organic product ecommerce company. It provides delivery service of fresh vegetables and fruits to the customers at their doorsteps by procuring all the produce from farmer's market every morning. This makes sure that customers get fresh produce every time they order. Procuring directly from farmer's market also reduces any intermediate costs and ensures best quality. The advantages of organic food are more based on perception than real facts. Much of this support of organic food as a healthier alternative comes from environmental groups who want to conserve the environment by avoiding pesticides and fertilizers. The producers of organic food strongly believe in the idea that organic food is superior to other types.

The organic ecommerce platform Black Bull Coin Network is being strengthened for directly linking farmers with retail as well as bulk buyers Interest in cryptocurrency is growing, and fast. With some pretty major brands, marketplaces and payment processors announcing their adoption of crypto, this digital payment method is firmly on the radars of retailers across the globe. Whilst not everyone thinks the world is ready for cryptocurrency payments, it's certainly getting harder to ignore the impact that crypto and the Blockchain technology on which it's built could have on ecommerce. Whether you're an ecommerce merchant just dipping your toes into the cryptocurrency waters, or you're sold on the idea of crypto payments and are exploring how to accept them in your online store, it's important to keep on top of how this trend is unfolding. After all, awareness and understanding today could help forge a valuable opportunity for your business in the future.

BAB Coin Partner – Airdrop's

Black Bull Coin project is a Blockchain-based payment project that focuses on making reward points a commonly used as digital currency by improving the current reward points system in India, through Blockchain technology and tokenization. Although the reward points system is efficient in its current form, corporations have risks, a lack of transparency and security concerns with their centralized system for issuing and operating reward points. Black Bull Coin Airdrop Goals: · A fair, equal opportunity for many different people to get involved · Facilitate activity and capture a wider audience Airdrop recipients do not need to do anything to receive the Black Bull Coin. Ignore any requests for your private key.
